- Nultraviolet Medi-Cup Blisters are over 97% effective against the UV Spectral Range.

- Prevents Powdering, Crushing and Breakage.
- Significantly Reduces Risk of Cross Contamination
- Manufactured from FDA Acceptable Materials.

Medi-Cup Blisters have been specifically designed to accommodate the packaging needs of virtually all solid oral medication. 13 different styles of "25" blisters are available in 6 sizes - Mini, Standard, Deep, Jumbo, Oval and Deep Oval Blister configurations. Amber and Green Nultraviolet Blisters contain special ultraviolet inhibitor to protect medication from the harmful effects of ultraviolet light. When used with our Lid-Label Covers, Medi-Cup Blisters provide either 6-month or 1-year beyond-use dating.

Our Deep and Jumbo Blisters are ideal if you're packaging compounded meds, veterinary drugs or large size medication, like double or triple "0" capsules. Our Mini and Oval Blisters were designed for instances where space is at a premium.

Each Medi-Cup Blister has a denesting hip which allows for easy separation of single sheets. Yet the sealed units can be interfaced/offset to reduce storage space requirements. The semi-rigid construction of the blister sheets protects the physical integrity of your medication and prevents powdering, crushing or breakage.

Since each blister is a clean sheet, the risk of medication cross-contamination is significantly reduced. All blister sheets, in coordination with the accompanying Lid-Label Covers, are perforated to allow for easy separation and dispensing of individual doses. Each blister yields a "peel corner" for easy access to your meds.
