Autodrop & Autosqueeze

Makes Dispensing Eye Drops Easier!

The design of the **Autodrop** draws the users gaze away while holding the lower lid gently in place. Eye drops are successfully delivered on the first attempt, every time.

Autosqueeze helps patients with dexterity issues self-administer eye drop medications. It clips around the bottle providing an ergonomic grip and extra leverage. Each device can be used alone or connected directly to each other for the easiest experience.

Autodrop

- Clips onto Almost any Eye-Drop Bottle
- Holds Bottle at Proper Angle
- Small Lip Holds Lower Eyelid Open
- Unique Pinhole Directs Eyesight Upward and Away from Descending Drops
- Can be Used Alone or Connected Directly to **Autosqueeze**

Autosqueeze

- Ideal for Patients with Weak or Arthritic Fingers
- Fits Virtually All Eye Drop Bottles
- Improves Patient Compliance
- Developed in Collaboration with the British Royal National Institute for the Blind
- Can be Used Alone or Connected Directly to **Autodrop**
